President Roosevelt spoke extemporaneously and with deep earnestness

co'ored man and colored woman, to nothing that can be done better for the white man who is to live side by train that colored man up to be good citizen. From the standpoint of was delivered to the students of thing that can happen is to have the Hampton institute by President Roose- colored people around him become He dwelt particularly on the ne- thrifty, industrious, homemakers and ship unless accompanying it there was young men and women to walk by the right type of family life in the themselves. The colored man who helps his race most is he who helps teach the members self-respect-hardworking, intelligent, law-abiding citizens. No race, no nationality, ever raises itself by the exhibition of genfus in a few men; what counts is character, the character of the average man and the average woman."

VALUABLE SUGGESTIONS.

Dr. McCormack's report as to health conditions in Kentucky is full of valuable suggestions. His charges as to the lack of sanitation in public places are well founded. He expresses some telling truths when he says, as the Courier-Journal has so often urged, that while our efforts to prevent the introduction and spread of exotic diseases have been in the main satisfac-tory we have been far less successful in preventing, or even arousing an interest in the prevention of consump-tion, typhoid fever, diphtheria, scarlet fever, whooping cough, dysentery and cholera infantum, diseases of infinitely more importance to the people of Kentucky, because they contribute so largely to our sick and death rate every day in every year, and entail an annual tax upon our resources of hunderds of thousands of dollars. Diseases are relatively important to any ople, as they cause sickness and deaths, and, considered in this way, cholera, yellow fever and even smallpox, of which the majority are so afraid, sink into insignificance as compared with the common household plagues above named." And yet one case of yellow fever or cholera Kentucky would cause the people to take greater preventive precautions than do all the hundreds and thousands of cases of consumption, typhoid fever, etc.-Courier-Journal.

the ground most good. It has been very pleasant to take. nearly six weeks since this section had a good rain and the ground was so parched as to discourage agriculturalists. Vegetables were withering and the remainder of the crop was seriously threatened.

The tobacco growers especially were anxious about the weather. This is time for setting out plants but the hard, dry ground had a forbidding appearance. The rain came softly and none of it ran off as would have been the case had it come with a dash. It soaked in all through the night and loosening up and absorbing the welcome moisture.
